1. I can not login to my APR3000N WiFi Range Extender management page at 192.168.10.253.

If you cannot access this WiFi Range Extender management page at 192.168.10.253, please reset your device to manufacture settings

Reset WiFi Range Extender:
Keep WiFi Range Extender Power on, use a pin to press and hold the small hole on the side of this device for about 10 seconds.

If you are still not able to access to 192.168.10.253 after reset, please connect the APR3000N (must be plugged into the power socket) to your computer by ethernet cable RJ45 (included in the box) and disconnect your computer from any other connection (unplug the cable if your computer is connected to internet by cable or disconnect from your wireless connection). Just leave the APR3000N connected to your computer by Ethernet cable RJ45. At this stage, you should be able to reach the access page 192.168.10.253.

2. How do I install my wireless adapter in Windows 8.1?

Addon wireless adapters can be detected automatically and installed by windows 8.1. You don't need to install any driver at all.
